**Snowman Challenge**

**Procedure**
Pick a card and balance the chemical equation found on that card! Write the number, equation, and answer in the box below and have your teacher check your answer. If the answer is correct, put the card back and pick another card. If you do not get the correct answer, keep trying until you get it right!

**Game Rules**
1. If you pick it, you solve it! Teams are not allowed to put a card back if they don’t like the problem on that card. Teams are also not allowed to peek at the problem before choosing to take a card!
2. Your team can only work on one card at a time! Teams must finish a card and get the answer approved by your teacher before getting for another card.
3. Teams must stay together and solve the problems together! All team members must be together when checking answers.
