Pre-lab
Visit ArtofManliness.com, and use *The History of Invisible Ink* article from September 9\textsuperscript{th}, 2011, to answer the questions below.

1. What are the two categories of invisible ink?

2. Explain the difference between the categories of invisible ink and list examples for each category.

3. Find one interesting example of invisible ink from Ancient Times and briefly explain it:

4. Explain how iodine worked as a universal reagent for invisible ink during World War I?

5. How did the Germans get away with still using invisible ink after iodine had been discovered as a universal reagent?

6. When mail was intercepted during World War II and sent to the FBI labs for testing, what are the three conditions that the paper would be exposed to in attempt to reveal secret messages or codes?

Materials
- Lemon juice
- 10ml graduated cylinder
- 50ml beaker
- Cotton swabs (Q-tips) or paint brush
- Hot plate
- Baking soda
- Water
- Stirring rod
- White computer paper
Safety
- Always wear safety goggles when handling chemicals in the lab.
- Wash your hands thoroughly before leaving the lab.
- Follow the teacher’s instructions for cleanup of materials and disposal of chemicals.
- Exercise caution when using a heat source. Hot plates should be turned off and unplugged as soon as they are no longer needed.

Procedure

Invisible Ink Recipe #1
1. Measure ~5ml of lemon juice with the graduated cylinder and add it to a 50ml beaker (pour juice or squeeze lemon).
2. Write a message with the lemon juice on a plain white piece of paper. You can use a cotton swab or paintbrush as a pen.
3. Let the paper dry completely.
4. Heat the paper up by holding it over a hotplate or other heat source. Be careful to not hold the paper too close or it will burn.
5. Read the message which should appear in a pale tan or brown color.
6. Complete the data table.

Invisible Ink Recipe #2
1. Using the graduated cylinder measure ~5ml of baking soda and add it to the 50ml beaker. Measure ~5ml of water in the graduated cylinder and add it to the beaker with the baking soda.
2. Use the stirring rod to mix the baking soda and water until it is a uniform mixture.
3. Write a message with the baking soda mixture on a plain white piece of paper. You can use a cotton swab or paintbrush as a pen.
4. Let the paper dry completely.
5. Heat the paper up by holding it over a hotplate or other heat source. Be careful to not hold the paper too close or it will burn.
6. Read the message which should appear in a brown color.
7. Complete the data table.
